CITY OF FOND DU LAC - Memorandum

City Manager

To: City Council

From: Joseph P. Moore, City Manager

Date: August 22, 2014

Subject: 2015-2019 Capital Improvement Plan

Introduction

With this memo is your copy of the proposed 2015-2019 Capital Improvement Plan (CIP). A Capital Improvement Plan is a statement of intent by City officials to establish a multi-year program for major capital expenditures and the financial resources necessary to accomplish the plan. A Capital Improvement Plan is a flexible planning tool designed to be altered annually as conditions warrant.

A multi-year capital improvement plan provides a long-range viewpoint for the community to identify needed projects and expenditures, selects those projects deemed most important in comparison to all others (priorities), determines when such projects should occur and anticipates the impact such expenditures will have on the community and its financial condition.

Some of the benefits of developing a long-range capital improvement plan are that it:

- 1. Provides a stable tax rate which allows taxpayers and the city government to plan more effectively;
- 2. Provides adequate time to plan and coordinate construction projects and eliminate costly duplication of efforts;
- 3. Provides adequate time to search for alternate methods of financing, including debt issues and grants-in-aid;
- 4. Provides time to acquire land and right-of-way where needed;
- 5. Allows time for communication and public input regarding future project plans for the community;
- 6. Reduces spur-of-the-moment decisions; and
- 7. Assists in planning efforts of other public utilities, agencies, and businesses.

The City defines capital expenditures as projects which cost more than \$25,000 and have a life expectancy of more than six years. Projects are evaluated and priorities are assigned based upon demand or usage, prior commitments, age and condition of facilities and equipment, and costs versus benefits. Priorities are subject to change as conditions warrant.

This plan <u>does not authorize any expenditure</u>, but does provide a plan of capital expenditures for the development of each year's budget.

Capital Financing Philosophies and Debt Levels

There are two major philosophies used in the financing of long-term capital projects: the "payas-you-go" and the "pay-as-you-use" philosophies.

The "pay-as-you-go" philosophy is based upon financing capital projects with current revenues and property tax levies or accumulated resources. Under this financing method the community can save on interest costs by avoiding debt issues.

The "pay-as-you-use" philosophy is based upon debt financing of capital improvements. Under this philosophy, those citizens paying for the projects use them while they are paying for them. An example would be a major street construction project which is financed by issuing debt. The citizens who use the street in the future pay the property taxes needed to repay the debt.

2015-2019 Capital Projects Overview

Total capital projects for all funds vary by year and range from a low of \$8,412,000 in 2018 to a high of \$16,377,000 in 2019. Details of the individual projects, their timing as well as the funding sources for the projects are listed on the projects detail pages for each department by year. The total proposed 2015 capital projects equal \$13,051,500. Some of the more significant 2015 projects include:

- TID #10 Industrial Park Improvements- \$1,720,000
- Wastewater Utility annual clear water elimination program \$1,800,000
- Water Utility annual main replacement program \$1,765,000
- Water Utility north well field expansion \$500,000
- Street improvement projects \$2,123,000
- The beginning of a four-year program to install standby power generators at storm water pump stations \$278,000
- Various other storm water improvement projects \$604,000
- Park improvements \$585,000
- Fire Department engine/rescue vehicle replacement \$650,000
- Ambulance replacement \$225,000
- Annual Police squad replacement program \$265,000
- Public Works capital equipment replacements \$835,000

2015 Projects Funded by General Operating Funds

One of the more significant changes to this CIP compared to last year's is the amount of projects funded by general operating revenues rather than long-term debt. The amount of 2015 projects funded by general operations is \$2,079,000 compared to \$625,000 in 2014. A reduction in budgeted operating costs in 2015, most notably wage and benefit costs, as well the amount of

available general fund balance, allows for the additional pay-as-you-go financing of capital projects.

A review of the projects funded by operations will show that they are either maintenance-type expenditures or annually recurring projects where the City spends similar amounts on these types of projects every year. It is good financial practice to fund such projects on a "pay-as-you-go" basis with operating funds, if possible, rather than funding these projects with long-term debt. It was the City's practice 10 to 15 years ago to fund nearly all annually recurring projects on a pay-as-you-go basis. Within the past 7 to 10 years the City increasingly relied upon borrowed money to fund its annually recurring projects. This situation contributed to driving up the City's debt levels, debt payments and the property tax levies required to repay the debt. The changes proposed in the 2015 CIP return the City to its former, more financially sound, practice of funding its annually recurring projects on a pay-as-you-go basis.

Another benefit of funding the annually recurring projects with operating funds rather than long-term debt is that the amount of money the City borrows in future years is reduced. Not only will the City have a lower amount of outstanding debt in future years, but its future debt payments and property tax levies required to pay debt principal and interest will be lower than they otherwise would have been if the City continued its practice of borrowing for its annually recurring capital projects.

A detailed schedule listing the projects funded by operations is included in this report.

2015 TID #10 Improvements

The 2015 project total includes \$1,720,000 for improvements in Tax Increment District (TID) Number 10. These projects will take place in 2015 only if demand requires the projects to move forward. The projects will be funded by a general obligation debt issue which will be repaid by future tax increment revenue resulting from the new development in the TID. No general taxpayer money is used to fund TID projects or to repay TID debt.

2015 Projects Funded by Long-Term Debt

The total amount of 2015 projects to be funded by general obligation (G.O.) long-term debt, excluding the TID #10 project, is \$2,589,200. A detailed schedule listing the projects funded by general obligation long-term debt is included in this report.

2015 Capital Grant Funding

State and federal grants of \$472,200 are used to fund a portion of various 2015 projects.

2015 Ambulance Equipment and Replacements

An ambulance replacement and equipment of \$300,000 is funded by a portion of the ambulance user fees (ambulance bills) which are set aside for ambulance equipment replacements.

2015 Public Works Capital Equipment Replacements

Public Works capital equipment replacements are funded with a Public Works Capital Equipment Replacement Fund, into which the proceeds of industrial park land sales are placed.

2015 Sanitation Equipment Replacement

The 2015 automated sanitation truck replacement is funded by a capital equipment replacement fund into which a portion of the residential solid waste collection fees are deposited each year.

Repayment Term for New G.O. Debt

The G.O. debt that the City issues to fund general capital projects in 2015 and future years will be issued for a term of 10 years rather than 20 years. This policy, implemented in 2014, is a return to the City's past (pre-2007), more fiscally sound debt management practice. The reason for this change is a closer matching of the debt repayment terms with the useful lives of the assets or projects acquired with the debt.

Decreasing G.O. Debt Balances

Appendix A is a projection of the outstanding G.O. debt <u>balances</u> through 2019. Existing debt, new debt and total debt balances are indicated on the chart. The projections indicate that even with the new debt issued for the capital projects contained in the 2015-2019 CIP, the G.O. debt balance will decrease every year. The G.O. debt balance is projected to drop 17% from \$78,445,000 in 2014 to \$65,164,000 by 2019.

Consistent with past City Council policy, 60% of the debt allowed by the State (legal debt limit) is used as the limiting factor in developing future capital expenditure plans. As shown in Appendix D, the City's projected debt levels are at the 60% policy guideline in 2015, but are projected to drop to 45% of the legal debt limit by 2019.

Increasing G.O. Debt Payments

Appendix B is a projection of G.O. debt <u>payments</u> through 2019. Existing debt, new debt and total debt payments are indicated on the chart. Total G.O. debt payments are projected to increase each year over the next five years by a total of \$4,100,000.

Increasing Property Tax Levy

A major consideration in developing the Capital Improvement Plan is the impact the proposed projects will have on future property tax rates. The City's property tax levy is subject to strict State-imposed levy limits. Under the levy limit, the City's property tax levy is allowed to increase by no more than the growth in property value due to net new construction, which is 1.97% for 2015. The levy limit is further allowed to increase by the amount of increases in general obligation debt principal and interest payments.

The property tax rate projections indicated in Appendix C show that scheduled increasing debt payments will require increases in the portion of the property tax levy needed for debt service, and the total property tax levy over the next several years. The chart further indicates that the portion of the property tax for operating costs is virtually unchanged over the next several years. The increases in the tax rates are due almost entirely due to required increases in the debt payment portion of the tax levy.

2015 Utility Projects

The 2015 CIP includes \$2,082,000 in Wastewater Utility projects and \$2,930,000 in Water Utility projects. All of the utility projects are funded by utility operating funds rather than long-

term debt. No general taxpayer money is used to support the utility operations, utility capital projects or utility debt payments.

Declining Utility Debt Balances

With no new utility debt, Appendix E indicates that the Water Utility debt balances drop rapidly from \$49,892,000 in 2014 to \$33,464,000 by 2019. Appendix F indicates that the debt balances for the Wastewater Utility drop even more dramatically from \$40,394,000 in 2014 to \$23,317,000 by 2019.

Future Capital Projects

Appendix G contains a list of known future capital projects that are beyond the five-year time frame of the 2015-2019 capital improvement plan.

Capital Improvement Plan Workshop

A City Council Committee of the Whole workshop on the proposed 2015 Budget and proposed 2015-2019 CIP will held on Wednesday, September 3, 2014. This workshop will provide the City Council with the opportunity to ask questions regarding the proposed projects and to make any modifications to the plan as deemed appropriate.
