

HOW DOES LEAD AFFECT MY HEALTH?

Adults exposed to lead can suffer from:

- ◆ Cardiovascular effects, increased blood pressure (hypertension)
- ◆ Decreased kidney function
- ◆ Reproductive problems (both men and women)

Young children, infants, and fetuses are particularly vulnerable to the harmful effects of lead because the physical and behavioral effects of lead occur at lower exposure levels in children than adults.

Even low levels of lead in the blood of children can result in:

- ◆ Behavior, learning, and hearing problems
- ◆ Slowed growth
- ◆ Anemia
