

**Fond du Lac Community Survey - Overview and Introduction**  
**MSA Professional Services**  
**January 10, 2020**

***The survey results will inform the planning process, but will not dictate plan policies***

The 2019 Community Survey collected opinions from more than 1,000 members of the Fond du Lac community. It is one of several methods by which the City is collecting viewpoints about the City's future growth, change and improvement. It is important to keep in mind that this survey will *inform* the crafting of goals and policies in the Comprehensive Plan, but it does not constitute a *vote* on various city policies. The City Council has the final say on the content of the Comprehensive Plan and may support unpopular policies on specific issues as part of a comprehensive package of interrelated policies deemed to be in the City's best, long-term interest.

***The survey results are useful, but beware the biases***

A total of 1,012 people participated in the survey. This is a robust sample of the community, statistically, though there is some bias in this sample as compared to all City residents. Residents who are notably over-represented (giving them a stronger voice in the results) include women; people age 30-49; white, non-hispanic people; homeowners; and medium- to high-income households. Conversely, residents who are not as well represented in these results include men, people younger than 20, communities of color, renters, and lower-income households. These biases are a common, persistent challenge of community engagement efforts. The survey results are still a useful expression of community preferences, but it is important to keep in mind the biases when using these results to inform policy decisions.

***Planning Areas Map (from the Survey)***

***Residents are generally satisfied with their neighborhoods with the exception of the Northwest Planning Area (north of Johnson St and west of Main Street)***

This planning process is attempting to orient residents to their needs and interests within the seven designated planning areas. We asked people to rate the number of street trees, walkability, bikeability, street lighting, safety, property upkeep/cleanliness, and aesthetics along major streets within their planning areas. Number of street trees, property upkeep/cleanliness, and walkability had the highest ratings (in that order) looking at the overall response, while bikeability and street lighting had the lowest (Q. 8). The Northwest Planning Area had the lowest ratings in all categories with a quarter of respondents providing a poor rating for bikeability, street lighting, safety, property upkeep/cleanliness and aesthetic along major streets.

***Safety is vital***

“Safety/low crime” was identified as the most influential factor in deciding where to live. More than two-thirds of respondents (70%-75%) rated safety as “good” or “excellent” in their planning area, except in the Central (43%), West (44%) and Northwest (39%) planning areas (Q.8). Among respondents who may move in the next five years, 57% stated they would not move or stay in Fond du Lac with many citing perceived crime or safety concerns (Q.20).

***City Housing Stock is faring better for homeowners than for renters***

Satisfaction levels regarding home ownership in terms of supply, cost, and quality are significantly higher than those of rental properties. When asked what they thought about housing in Fond du Lac, “Good” was the primary response for ownership housing supply/availability, cost and quality, while “Fair” or “Poor” was a more common response regarding rental housing supply/availability, cost and quality (Q. 21). Notably, 27% of respondents felt the rental housing quality was “Poor”.

***There is support for City initiatives to improve housing affordability (Q.14)***

The majority of respondents agree the City should support ownership and rental housing affordability initiatives (73% and 56%, respectively). While the support is much stronger for ownership housing affordability initiatives, more than four-fifths of renters (81%) agreed with City support of rental affordability support.

***The pace of multi-family residential development is too fast, while retail growth is too slow***

Over a third of respondents (35%) said that multi-family residential development has moved too fast over the past five years. This figure is over three times higher than any of the other development types listed. On the other hand, approximately 66% of people said that retail development has moved too slow, although, several people commented on high vacancy rates for commercial/retail businesses (Q. 22).

***Investment opportunities should be focused on the downtown and Main Street***

Respondents identified the downtown district (60%) as the primary area the City should focus on to stimulate property investment due to the amount of vacant buildings and/or poor appearances. Main Street north of downtown (51%) and south of downtown (45%) were the next top choices (Q. 23).

### ***Support for investment in bike and pedestrian infrastructure is strong***

Two of the top three desired park and recreation improvements in every part of the City involved bicycle infrastructure. The number one choice was “off-road walking/biking trails” with “on-road bicycle facilities” as the third highest choice (Q. 9). Over 75% of respondents support or strongly support sidewalk, trail and pedestrian crossing improvements to enable safe walking, and nearly 70% support bike lane and trail improvements to enable safe biking (Q. 25). At least one-fifth of respondents stated walkability is “poor” in the Northwest (20%) and Far West (28%) planning areas, while more than a quarter of respondents stated bikeability is “poor” in the West (27%) and Northwest (27%) planning areas (Q.8).

### ***Support for “sustainability” initiatives is strong***

Regarding municipal actions that could make the City more efficient and environmentally friendly, over 70% of respondents agreed or strongly agreed that the City should expand the use of alternative and renewable energy in public facilities (Q. 35). When asked to select up to five efforts the City should take to become a more sustainable community (Q.33), the top responses were: Using LED solar or other energy efficient street light fixtures (51% of respondents), building a public market with outlets for locally grown food products (44%), and using sustainable “green” building technologies when building a new or expanding a public facility (37%). In addition, nearly half of all respondents (45%) are in favor of utilizing grants/loans to encourage development that protects natural resources through exceptional energy efficiency or stormwater management (Q. 34). Moreover, the support for the above sustainable initiatives was the same no matter if you are looking at overall response or filtered to just City residents responses.
